

GUIDE:

Preparing the PC for PBT-24-4757

1. Install Adobe Acrobat PDF Reader
2. Install Microsoft.Net 4.5.2 or higher
3. If you want to use an external USB-Camera, attach it to a free USB-port and install all included drivers
4. If your machine has also a builtin camera, please deactivate it in the Hardware Manager (Start => Systems Settings => Hardware Manager => right click on the builtin camera => disable)
5. Connect a printer to PC and install the drivers, print a testpage afterwards
6. Install a free version of TeamViewer
7. Connect the USB-Dongle and install the included USB-serial drivers - choose either the drivers for a x64 or x84 OS (Win7/8)
8. Copy Plate Brake Tester program folder onto your PC's desktop. Direct access to the program can be achieved with a shortcut (right-click on the program icon in the plate brake tester - folder / send to / create desktop shortcut)
9. Restart your Computer
10. At the first start of the application, a folder "Plate Brake Test - Report Sheets" will be automatically created on your desktop. It may not be deleted or changed! This folder serves as a database where the „Test Report Sheets“ are stored.
11. Make sure that a logo of your Company is stored on your hard drive
